

ILLUMINATED VEHICLE WRAPPING

Equipment Visual Warning Safety Device

- Increase equipment visibility
- Visual alternative to audible devices
- Available in multiple colours & styles
- Bespoke designs available
- Cost effective safety solution
- Clean & straightforward installation
- Integrates with other FTC systems

INCREASES SITE SAFETY

MULTIPLE SOLUTIONS

FTC have developed a range of revolutionary illuminated vehicle livery suitable for any type of materials handling equipment, road going vehicles and plant equipment.

What is FTC Illuminated Vehicle Livery?

FTC's Illuminated Vehicle Livery is an electronic lighting solution that greatly enhances visibility of potentially dangerous equipment and machinery. Offering the reflective qualities of hi visibility panels with the ability to animate, illuminate, flash or pulse sections of the panel (using light for added visual awareness)

- **Cost effective warning device**
- **Can be fitted / retrofitted**
- **Robust & durable**
- **Increase site safety**

The illuminated vehicle wrap range has been developed to enhance site safety and increase pedestrian & driver awareness of the presence of moving hazards. The range includes multiple solutions offering varied visual warning styles all designed to increase site safety by using light as a visual warning device.

How does it work?

Typically the illuminated vehicle wrap is produced to fit certain panels on the desired equipment. This is generally to the rear but there are no limitations to its mounting location. FTC Ltd can offer a number of options as to how the wrap illuminates from switching on with the ignition, an auxiliary on/off switch or a day/night sensor option.

Other Applications

The FTC illuminated livery range can be used in many different applications other than vehicle illumination. The flexibility offered can extend to fixed infrastructure, signs, bespoke solutions and brand advertisement.

- Materials handling equipment
- Road going vehicles
- Plant equipment

Technical Specification

- Retro reflective option available
- Robust and hard wearing
- Straight forward installation
- Bespoke designs available
- Adjustable brightness and flash patterns
- Various wiring options including IGN On, day/night sensor, connection to other FTC products
- CE Certified
- Multi voltage
